1. Introduction

This report presents the Scope 1 and 2 greenhouse gas (GHG) emissions inventory for TAJCO Group A/S under operational control for the reporting period from January 1, 2025, to December 31, 2025. It is prepared in accordance with the requirements outlined in the GHG Protocol: A Corporate Accounting and Reporting Standard (Revised Edition), developed by the World Resources Institute (WRI) and the World Business Council for Sustainable Development (WBCSD).

The primary purpose of this GHG Report is to demonstrate conformity with the GHG Protocol and to support transparency, consistency, and credibility in reporting, enabling the verification of our GHG inventory.

1.1 Description of the Reporting Organisation

TAJCO Group A/S is a global supplier to the automotive industry, specializing in the design, development, and production of premium exterior accessories with a particular focus on exhaust tailpipe finishers and other decorative trims. TAJCO's products are engineered to enhance the aesthetic and functional appeal of vehicles, supporting car manufacturers worldwide.

With headquarters in Denmark and production and R&D facilities in Europe and Asia, TAJCO combines Danish design heritage with advanced manufacturing capabilities. Our operations are built on a foundation of innovation, quality, and sustainability, and we are committed to minimizing our environmental footprint while meeting the evolving needs of our customers and the industry.

Our business activities span the entire value chain from product design and engineering to manufacturing, assembly, and delivery. TAJCO is dedicated to integrating environmental responsibility into every aspect of our operations, including energy use, resource efficiency, and GHG emissions management.

This GHG inventory reflects TAJCO Group A/S's commitment to environmental stewardship and forms part of our broader sustainability strategy aimed at supporting the transition to a low-carbon economy.

This GHG Report covers all entities within the TAJCO Group A/S under its operational control. The entities included in the scope are:

- TAJCO Manufacturing Co. Ltd. (China, Ningbo)
- TAJCO Group A/S (Headquarters in Denmark)
- TAJCO Germany GmbH (Germany)
- TAJCO North America INC (United States)

---------------------	---------------------	---------------------	---------------------------	--------------------------------------

- TAJCO Slovakia SRO (Slovakia)

2. Organizational boundaries

The greenhouse gas (GHG) emissions included in this report are consolidated using the **operational control approach** as defined by the GHG Protocol. Under this approach, TAJCO Group A/S accounts for 100% of the GHG emissions from operations, over which it has full authority to introduce and implement operating policies, regardless of equity share or financial ownership.

This method ensures that the emissions inventory accurately reflects the emissions from all facilities and activities where TAJCO could influence performance and implement emissions reduction strategies.

The reporting boundary includes all manufacturing, research and development, and administrative sites that fall under the operational control of TAJCO Group A/S during the reporting period

3. Reporting boundary

This chapter defines the reporting boundary applied in calculating and reporting TAJCO Group A/S's greenhouse gas (GHG) emissions. In line with the GHG Protocol Corporate Standard, the emissions are categorized into **Scope 1 (Direct)**, **Scope 2 (Indirect – Energy)**, and **Scope 3 (Other Indirect)** emissions.

3.1 Scope 1: Direct GHG Emissions

Scope 1 includes all direct GHG emissions from sources that are owned or controlled by TAJCO Group A/S. These emissions arise from on-site combustion of fuels and other industrial processes within TAJCO's operational control. For the reporting period, Scope 1 emissions include:

- Combustion of fuels for heating and production processes at TAJCO manufacturing facilities
- Fuel consumption from company-owned or controlled vehicles
- Emissions from stationary combustion sources (e.g., natural gas boilers, backup generators)
- Fugitive emissions, if applicable (e.g., refrigerants used in facility HVAC systems)

3.2 Scope 2: Indirect GHG Emissions from Energy

Scope 2 accounts for indirect GHG emissions from the generation of purchased electricity, steam, heating, and cooling consumed by TAJCO Group A/S. Although these emissions

Prepared by: Lunar Lu	Approved by: Christian Oberlechner	Issued Dep: BPO & RM & Sustainability Department	page
Date: 2026/06/15	Date: 2026/06/28	Date: 2025/06/15	4

Document No.: 04796	Document Version: 2	GHG Emission Report	Effective date: 2026/6/30	TAJCO ADDING VALUE TO CARS
---------------------	---------------------	----------------------------	---------------------------	--------------------------------------

occur at the facility where the energy is generated, they are attributed to TAJCO due to its energy consumption.

For TAJCO, Scope 2 emissions include:

- Purchased electricity used in manufacturing and office facilities
- Purchased district heating or cooling, where applicable

TAJCO reports Scope 2 emissions using both:

- **Location-based method** (reflecting the average emissions intensity of grids where energy is consumed), and
- **Market-based method** (reflecting emissions from electricity that TAJCO has explicitly chosen or contracted, such as green power or energy certificates).

3.3 Scope 3: Other Indirect GHG Emissions

Scope 3 emissions result from activities that occur in TAJCO's value chain but fall outside of its direct operational control. While not mandatory for reporting under the GHG Protocol Corporate Standard, TAJCO recognizes the importance of Scope 3 in understanding its full climate impact and driving sustainability across its supply chain.

The following Scope 3 categories are considered relevant and are either partially or fully assessed:

- **Purchased goods and services** – emissions from the production of raw materials and components sourced by TAJCO
- **Capital good**
- **Upstream transportation and distribution** – emissions from third-party logistics providers delivering goods to TAJCO facilities
- **Waste generated in operations** – emissions from the treatment and disposal of waste from TAJCO's facilities
- **Business travel** – emissions from flights, hotels, and other travel-related activities by TAJCO employees
- **Upstream Leased assets**
- **Downstream transportation and distribution** – emissions associated with the delivery of finished products to customers

A roadmap is in development for expanding the completeness and accuracy of Scope 3 data over time, with the goal of aligning with industry best practices and supporting TAJCO's broader sustainability strategy.

4. Scope of GHG Emissions

4.1 Scope 1: Direct GHG Emissions

Scope 1 emissions originate from direct sources owned or controlled by the company. These include:

- **Stationary combustion:** Fuel consumption from boilers, furnaces, generators, etc.
- **Mobile combustion:** Fuel consumption from company-owned vehicles and fleet operations.
- **Process emissions:** Emissions from industrial or manufacturing processes (e.g., chemical production, cement manufacturing).
- **Fugitive emissions:** Unintended releases of GHGs from refrigeration, air conditioning, or industrial processes.

4) Upstream transportation and distribution

5) Waste generated in operations

6) Business travel

8) Upstream leased assets

Downstream Emissions

9) Downstream transportation and distribution

15) Investments

TAJCO products are intermedia products and not designed by TAJCO. TAJCO develop their production in collaboration whit the client to meet the clients' specifications. Hence TAJCO have a minimum influence on the further processing of the intermedia product. Other downstream activities are excluded from analysis since it is an intermedia product and the influence from TAJCO is minimal.

Omission categories are listed in table below:

3. Fuel and energy related activities (T&G)

7. Employee commuting

10. Processing of sold products

11. Use of sold products

12. End-of-life treatment of sold products

13. Downstream leased assets

14. Franchises

5. Methodology & Emission Factors

To ensure data accuracy and consistency, the following methodologies are applied:

- **Data Sources Used:** Utility bills, fleet fuel consumption records, supplier data, lifecycle analysis
- **Calculation Methodology:** GHG Protocol
- **Emission Factors Used:** IPCC, EPA, DEFRA, regional factors, supplier data, Exiobase

7. Target Reduction Goals

TAJCO Group A/S has committed to the following targets:

- **Short-term target:** GHG emissions 2030 Targets
 - By 2030, we aim to achieve 90% carbon reduction for our Scope 1 + 2 greenhouse gas emissions
 - By 2030, we aim to reduce our Scope 3 greenhouse gas emissions by 30% compared to 2020.
- **Long-term target:** GHG emissions 2050 Targets
 - TAJCO's ambition to be climate neutral by 2050 in all Scopes

8. Conclusion & Next

This report is integral to TAJCO Group A/S's sustainability strategy. Moving forward, we aim to:

- Enhance data collection accuracy through automation
- Strengthen supplier engagement to minimize Scope 3 emissions
- Conduct regular assessments and refine strategies accordingly

We are committed to continuous improvement and will provide annual updates on our progress.
